BUILT BY A TEAM THAT HAS SECURED MAJOR INSTITUTIONS WORLDWIDE FOR 25 YEARS.

ARGENT BOARD ANSWERS

THE BOARD ASKS FIVE QUESTIONS ABOUT AI. ANSWER FROM ONE CONSOLE.

Argent Strategic Intelligence sits between your AI agents and the AI models they call. Every request through it is counted, priced and decided, on a signed record. So the board's questions get answered from the console, not from last month's invoice and a spreadsheet. Gartner expects over 40% of agentic AI projects to be canceled by the end of 2027, over cost, unclear value or weak risk controls.[1]

Each answer has a place in the console: Home for agents, tokens and cost; Reports for owners and refusals; Live traffic for spend as it is priced; the 30-day trend and budgets for direction; Work items for what each project cost.

SEE.
Agents, owners, tokens and spend, in one place.

PROVE.
Figures read from the signed record.

STOP.
Budgets mark the point where spend gets close.

THE FIVE QUESTIONS, ANSWERED

1	**How many agents?** How many agents do we have, and how many are working?	Home counts the agents working through Argent: how many are active and how many sent a request in the last two minutes, with the last 24 hours of requests and cost, each against the 24 hours before, and tokens with the share read from cache. Spend by owner shows who owns each agent.
2	**Under control?** Does every agent have a named owner?	Reports opens on Security posture for the last 30 days: checks that need attention, the share of requests Argent refused, set against the period before, and agents without a live owner. EXPORT VIEW AS PDF takes it to the board.
3	**What we spend** Which agents and models carry the cost?	Live traffic's cost view adds up spend as each request is priced, agent by agent, with each agent's share. On Home, Tokens used splits input, output and cache, and Model mix shows which models carry the work.
4	**Is it going up?** Are we spending more than we were?	The Spend card draws the last 30 days against the 30 before, and Estimated cost gives the change in one line. The Budgets card shows each budget's spend against the cap you set, with a marker at 80%.
5	**Is it worth it?** What did the loan file project cost?	When an agent says which project it is working on, Argent books its priced spend there, from the signed record, and rolls it up to the project. Work items shows each project's spend against its budget: within cap, near limit or over.

BOARD OVERSIGHT IS ALREADY IN THE RULES

SEC, Regulation S-K Item 106(c). US public companies must "describe the board of directors' oversight of risks from cybersecurity threats".[2]

NYDFS, 23 NYCRR 500.4. The CISO of a covered entity must report in writing at least annually to the senior governing body, which must oversee cybersecurity risk management.[3]

HOW A TEAM STARTS

1. Route. Point your agents at Argent; each one is registered with a named human owner.

2. Set. Put budgets on the company, departments, people and agents, and on your projects.

3. Answer. Open Home and Reports before the board meets, and export the view as a PDF.

BOOK A DEMO. WE WILL WALK YOUR BOARD'S FIVE QUESTIONS THROUGH THE CONSOLE.
